

Altromin is an **ISO certified**, German company with more than 50 years of experience offering standardized nutritional solutions and individual special diets for breeding of laboratory animals and wide range of scientific experiments.

Standard breeding & maintenance diets

- Formulas composed for all rodents and non-human primates
- Grain-based, high quality, natural raw materials used for diet production
- Automatic production and thermal exposure for longer shelf line
- Standardized formula and control of all macro- and micronutrients components
- Free of alfalfa and fish/animal meal
- Deficient in nitrosamines and deficient in phytoestrogens as an option
- Fortified in vitamins for autoclaving, extruded for easier consumption

MOST POPULAR DIET TYPES, PAPER BAGS 12,5 KG

- 1324 Maintenance diet for mice and rats
- 1314 Breeding diet for mice and rats
- 1314 FORTI Breeding diet for mice and rats for autoclaving
- 1319 FORTI Extruded breeding diet for mice and rats, for autoclaving

OTHER DIET OPTIONS BASED ON STANDARD FORMULA

AUTOCLAVABLE OR IRRADIATED DIETS

All standard diets are available as FORTI option, with higher vitamin content for autoclaving. We also deliver Gamma irradiated diets with dose rates 5 to 50 kGy.

MEDICATED DIETS

Altromin prepares also diets with the addition of active pharmaceutical substances delivered by customer. Individually composed formula provides specific experimental needs as well as animal treatment (f.e. oxyuriasis).

TOTAL PATHOGEN FREE – TPF DIETS

TPF diets are comfortable solution for facilities without possibility of autoclaving. Plastic dual packing of diet portion provides sterilization using spray sterilant each 5 kg batch before entry to the clean room.
